Basic example

Declare this namespace on the page.

```
xmlns:core="clr-namespace:Tritium.Maui.Core;assembly=Tritium.Maui.Core"
<core:TritiumBadge Text="Complete" HorizontalOptions="Start" />
```

Features

• Set the caption with Text.
• Pick up the current accent, ink, and chrome automatically.
• Repaint when the theme pack, finish, fill, or accent changes.
• Drop it inline on a page without extra layout code.
• Stay readable in light and dark app themes.

Main API

• **Text.** The caption drawn inside the chip.

Accessibility

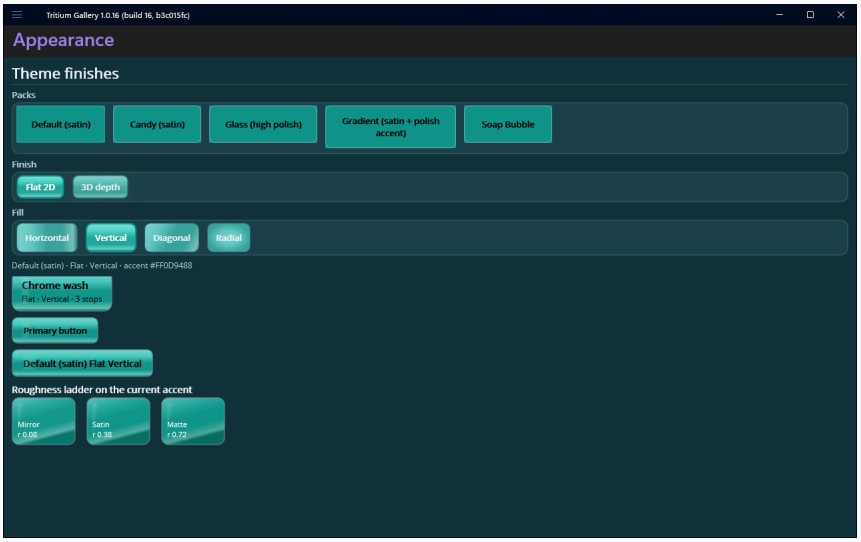

• Give the control a visible name on the page, the same way you label any .NET MAUI view.
• Pick theme colors with a clear difference between the text and the surface behind it. The theme packs do not add a separate contrast mode. The difference comes from the colors you choose.

• Do not use color as the only way to tell two states apart.
• Try the page with the platform screen reader on Android, iOS, Mac Catalyst, and Windows.
• Keyboard access follows the .NET MAUI view. Check the control on each platform you ship.

Tips

• Restore TritiumBadge from the package source on your license. These packages are not on the public NuGet Gallery.
